UX Designer, ABCTech

I. M. Tek said it best: "Good design is good business." Visualization is critical to discovering data-driven insights and effectively communicating that knowledge to others. Designers at ABCTech work to create experiences that work together, work the same, and work for our clients.

Your Role and Responsibilities:

ABCTech Research is looking to hire a UX Designer into the Emerging Technology Experiences team. The mission of this team is to quickly prototype, build and test new technologies, bringing them out of the lab and into the world. This team is comprised of extraordinary developers and designers, and product managers who work closely with members of the scientific research community.

As a UX Designer, you will help in defining the user experience, flows, interaction patterns, and the interface for internal and external facing products. You will collaborate across development, research, and product management to assure the solutions align with user needs and business goals. An optimal candidate should be passionate, curious, and a self-driven team player who has a strong collaboration ethic while working with a global multi-disciplinary team.

We are looking for a UX Designer who is experienced working in a fast paced environment within a global multi-disciplinary team. The candidate will be responsible for leveraging the ABCTech Design Thinking practice and brand guidelines while crafting user-centric solutions.

Required Professional and Technical Expertise:

 • User Flows / Storyboarding
• Wireframing (high and low fidelity)
• Interactive no-code prototyping for a variety of devices
• Using design systems
• Understanding visual design principles
• Interpreting user research insights into interactive solutions
• Client / leadership presentations
• Ability to work across multiple tracks of work
• Figma, Sketch, InVision, GitHub, Mural, Keynote

Preferred Professional And Technical Expertise:
• Remote and in-person usability testing and facilitation
• Background in working on software product design and development
